198 $A = \dfrac{3}{16} + \dfrac{9}{8} \times \dfrac{2}{3} = \dfrac{3}{16} + \dfrac{3 \times 3 \times 2}{8 \times 3}$

$A = \dfrac{3}{16} + \dfrac{3 \times 2}{8} = \dfrac{3}{16} + \dfrac{6}{8}$

$A = \dfrac{3}{16} + \dfrac{12}{16} = \dfrac{15}{16}$

$B = \dfrac{7}{5} - \dfrac{1 + \frac{4}{5}}{8} \times 5 = \dfrac{7}{5} - \dfrac{5\left(1 + \frac{4}{5}\right)}{8}$

$B = \dfrac{7}{5} - \dfrac{5 + 4}{8} = \dfrac{7}{5} - \dfrac{9}{8}$

$B = \dfrac{56}{40} - \dfrac{45}{40} = \dfrac{11}{40}$
